SUPERVISORY PATENT EXAMINER TECHNOLOGY CENTER 3700

Continuation of 11. does NOT place the application in condition for allowance because: (1) Applicant has amended some of the independent claims to include limitations contained in other claims, specifically "the source of pressurized fluid being insufficient to move the valve element toward the open position" and "moving to the second position for a predetermined period of time". Applicant argues on page 12 that Rammer et al. does not teach the source of pressurized fluid being insufficient to move the valve element to the open position, and further argues that the additional reference relied on by the examiner, Israel et al., also does not teach this limitation. In the arguments, applicant cites a pressure greater than the motion of the mechanical transferring means (Israel et al., col 12 line 65 - col 13, line 3). Although Israel et al. is capable of pressurized fluid greater than the mechanical means to open the valve, this particular function cited demonstrates a capability of the Israel et al. invention during a compression release event. The teaching cited by the examiner (column 12, lines 12-16) shows another capability of the Israel et al. invention where the pressurized fluid means is less than the mechanical transferring means, specifically for a main exhaust valve event. It is the examiner's position that Israel et al. has the capability to perform not only the limitations cited by the applicant, but other functions as well, and therefore, still reads on the claims as written and interpreted in their broadest sense. (2) Similarly, applicant argues on page 13 that the Rammer et al. reference does not hold the valve in a second position for a predetermined period of time, and cites col 5, lines 18-24 for justification. These lines do indeed indicate that pressure is the determining factor for that specific configuration rather than time. However, as the examiner has pointed out previously, Rammer et al. specifically mentions maintaining the valve in a second position "for a period of time" (Abstract, column 10, lines 29-33). The omission of "predetermined", in the opinion of the examiner, still would not make the claims cited by the applicant read over Rammer et al. Therefore, the rejections cited in the Final Rejection are maintained.
